

ON-PIN TO EXHIBIT AT 2025 PGA SHOW IN ORLANDO, FL, JANUARY 21 - 24

On-Pin Unveils Revolutionary 'Predictive Pace of Play' Feature for Verifeye at the 2025 PGA Show in Orlando.

Orlando, FL — On-Pin, a leader in golf technology solutions, is excited to announce the debut of its latest innovation, **Predictive Pace of Play**, at the PGA Show in Orlando. This groundbreaking addition to the patented Verifeye product suite revolutionizes the way golf course operators manage pace of play, empowering them to proactively address slow play before it even happens.

The Verifeye system has already garnered acclaim for its comprehensive capabilities, including:

- **Advanced Pace of Play Solution:** Provides a real-time pace map which offers clear visibility to what's happening on the course and is the only solution which collects individual player data. The data enables Verifeye to deliver powerful insights to golf course operators which increases revenue and enhance the golfer experience.
- **Reduce Labor Costs with Smart Marshalling:** Verifeye will proactively notify staff when slow play occurs on the course which enables operators to quickly pinpoint issues and address them in real time versus paying staff to continually drive around the course looking for issues.
- **Tee Sheet Optimization:** Leveraging data to help course operators confidently set tee time intervals that maximize utilization without compromising pace of play.

Now, with the introduction of the Predictive Pace of Play feature, Verifeye takes its capabilities to a whole new level. This one-of-a-kind solution analyzes the round time history of each player in a group and predicts which groups on the tee sheet are most likely to be slow. Armed with this information, golf shop staff can take proactive measures to address potential slow play groups before they even tee off, ensuring a smoother experience for all players on the course.

"We continue to invest in leading edge solutions which benefit golf course operators and players. Predictive Pace of Play is the first solution which gives course management the power to see into the future and address slow play days before the round is played" said Ian Glasson, On-Pin Founder.

Golf industry professionals attending the PGA Show are encouraged to visit [On-Pin's booth #2383](#) to see the Verifeye system and Predictive Pace of Play feature in action. Demonstrations will showcase how these advanced tools can transform course operations and elevate the golfing experience.

About On-Pin

On-Pin is a leading provider of innovative golf course management solutions. Its patented Verifeye system utilizes cutting-edge technology to deliver real-time insights that enhance operational efficiency and player satisfaction. Committed to advancing the golf industry, On-Pin continues to develop tools that empower operators and elevate the game.
